

Toppatoc is a tool for generating topological data from a set of points.

It is designed to be easy to use and to produce high-quality results.

The tool is written in Python and is available as a command-line interface.

It can be used to generate topological data from a set of points in a 2D or 3D space.

The tool is designed to be easy to use and to produce high-quality results.

The tool is written in Python and is available as a command-line interface.

It can be used to generate topological data from a set of points in a 2D or 3D space.

The tool is designed to be easy to use and to produce high-quality results.

The tool is written in Python and is available as a command-line interface.
