

After the release of the 2012 paper, the authors published a follow-up paper in 2013, titled "A Simple Model for Chinese Word Segmentation". This paper introduced a new model for Chinese word segmentation, which was based on the same principles as the 2012 paper. The authors claimed that their model was able to achieve state-of-the-art performance on the Chinese word segmentation task, and they provided experimental results to support their claim.
