

After the release of the Census 2000, the number of published statistical tables as a percentage of the Long Form table population increased to the 1990s. The number of parameters in the 1990s was approximately 10% of the total number of parameters in the 1980s. A large number of the parameters were the total number of parameters which were used to represent the population. The number of parameters in the 1990s was approximately 10% of the total number of parameters in the 1980s. A large number of the parameters were the total number of parameters which were used to represent the population. The number of parameters in the 1990s was approximately 10% of the total number of parameters in the 1980s.
