

What is the deepest trench in the Caribbean? The Puerto Rico Trench is located in the northern part of the Caribbean Sea, in the Atlantic Ocean. It is a deep-sea trench that is approximately 2,800 meters (9,186 feet) deep. It is located between the Lesser Antilles and the North American Plate. The trench is a major tectonic boundary, where the North American Plate is subducting under the Caribbean Plate. The trench is about 800 kilometers (497 miles) long and has a maximum width of 80 kilometers (50 miles) or 5. The deepest part of the trench is the Brownson Deep, which is 2,800 meters (9,186 feet) deep. It is the deepest point in the Atlantic Ocean and the second deepest point in the world's oceans. On
